

Commodity Movements

Commodity Flow Survey

Abstract

The Commodity Flow Survey (CFS) provides data on the movement of freight by type of commodity shipped and by mode of transport. The CFS is a continuation of statistics collected in the Commodity Transportation Survey from 1963 through 1977, and includes major improvements in methodology, sample size and scope. The Bureau of the Census used a sample of 200,000 domestic establishments randomly selected from a universe of about 800,000 in manufacturing, mining, wholesale, and some selected activities in retail and service. Each selected establishment reported a sample of shipments for a two-week period in each of the four calendar quarters of 1993. This produced a total sample of about 12 million shipments. For each sampled shipment, respondents reported domestic origin and destination, Standard Transportation Commodity Classification (STCC) code, weight, value, and modes of transport. Respondents also provided information on whether the commodity was shipped in a container, a hazardous material, or an export.

Source of Data

A sample of manufacturing, mining, wholesale, auxiliary warehouses, and selected retail and service establishments completed a questionnaire.

Attributes

Geographic Coverage of Data: U.S. totals, state, 89 National Transportation Analysis Regions (combination of Bureau of Economic Analysis Economic Areas)

First Developed: 1993

Update Frequency: Quinquennial (next planned survey year is 1997)

File Format: Aggregate data only will be released

Media: CD-ROM, Printed source, Internet

Significant Features/Limitations

The 1993 CFS differs from previous surveys in expanded coverage of intermodal transportation, additional industry coverage, and more detailed geographic levels. Earlier surveys reported only the principal mode. The 1993 survey asked for all modes used for the shipment (for-hire truck, private truck, rail, water, pipeline, air, parcel delivery or U.S. Postal Service, other mode, unknown). The 1993 CFS produces data at the U.S., state, and National Transportation Analysis Region (NTAR) levels. There are 89 NTARs, comprised of BEA Economic Areas covering the United States.

The 1993 CFS does not cover shipments of crude petroleum and imports, which primarily affect water transportation and pipelines. Oak Ridge National Laboratory has estimated commodity flows for these two categories. Also, the Survey does not cover establishments classified in the Standard Industrial Classification as farms, forestry, fisheries, oil and gas extraction, governments, construction, transportation, households, foreign establishments, and most retail and service businesses. Furthermore, the CFS does not cover data on shipments originating in Puerto Rico and other U.S. territories and possessions. Commodities that are shipped from a foreign location to another foreign destination, through the United States (e.g., from Canada to Mexico) are also excluded from the Survey.

Commodity Movements Originating in Maryland

Summary of 1993 CFS

In Maryland, the CFS measured \$99 billion of goods shipments weighing 123 million tons. Maryland accounted for approximately 2 percent of the value and 1 percent of the weight of total U.S. shipments. The CFS data cover shipments by establishments in mining, manufacturing, wholesale, and selected retail and service industries. The data exclude most shipments of crude oil; therefore, the totals and percentages do not fully reflect the contribution of pipeline shipments.

The major commodities shipped by establishments in Maryland vary when measured by value and weight. The main commodities shipped from Maryland by value were: food or kindred products; transportation equipment; chemicals or allied products; electrical machinery, equipment, or supplies; and machinery, including computers. The main commodities shipped by weight were: nonmetallic minerals; food or kindred products; petroleum or coal products; clay, concrete, glass, or stone products; and chemicals or allied products.

Local transportation of freight is important to Maryland's commerce. The CFS shows that in 1993, about 31 percent of the value and 57 percent of the weight of total shipments from Maryland were shipped to destinations within the state. About 39 percent of the value and about 69 percent of the weight of all shipments were between places less than 50 miles apart. In

comparison, about 30 percent of the value and 56 percent of the weight of total U.S. shipments were between places less than 50 miles apart. In Maryland, about 49 percent of the value of shipments and 80 percent of the weight of shipments were between places less than 100 miles apart.

About 69 percent of the value and 43 percent of the weight of all shipments from Maryland went to other states. Some of the most important destination states by value were: Virginia, Pennsylvania, New York, New Jersey, and the District of Columbia. Important destination states by weight were: Virginia, Pennsylvania, Delaware, the District of Columbia, and New Jersey.

Most commodities were moved by trucks, about 81 percent of the value and 84 percent of the weight. Rail was used to move about 4 percent of the value and 5 percent of the weight of shipments. The CFS data confirm the rising importance of parcel, U.S. postal, and courier services that have emerged in recent years. In 1993, this mode of transport was used to ship 484,000 tons of goods worth about \$11 billion or 12 percent of the value of all shipments in Maryland. In comparison, about 9 percent of the value of total U.S. shipments were moved by this mode.

1993 Commodity Flow Survey State Summary: Maryland
 Tabulation by the Bureau of Transportation Statistics, U.S. Department of Transportation

Summary	Value	Weight
Total shipments originating in Maryland	\$98.5 billion	123.2 million tons
Percent of total U.S. shipments (preliminary U.S. estimate)	1.6	1.3

Commodity Shipments Originating in Maryland Ranked by Value		Commodity Shipments Originating in Maryland Ranked by Weight	
Commodity	Percent of value	Commodity	Percent of weight
Food or kindred products	22.5	Nonmetallic minerals	28.1
Transportation equipment	16.2	Food and kindred products	16.4
Chemicals or allied products	7.1	Petroleum or coal products	16.2
Electrical machinery, equipment, or supplies	6.8	Clay, concrete, glass, or stone products	7.9
Machinery, including computers	5.4	Chemicals or allied products	5.0
Other commodities	42.1	Other commodities	26.5
Total	100.0	Total	100.0

Domestic Destinations of Shipments Originating in Maryland Ranked by Value		Domestic Destinations of Shipments Originating in Maryland Ranked by Weight	
State	Percent of value	State	Percent of weight
Maryland	31.0	Maryland	56.6
Virginia	11.6	Virginia	8.0
